

BRIAN KIMATHI | ENHANCESOFT PROPOSAL

Website Design, Branding & Digital Experience

PART A

TECHNICAL PROPOSAL

PHASE 1 FOCUS — CORPORATE BRANDING AND VISUAL IDENTITY SYSTEM

Understanding of the assignment, the Phase 1 identity programme, and the approach, work plan, and team to deliver it. Recommendations, assumptions, and referees complete this part.

02 · COVER LETTER

To: Charity Nzuki
Project Management & Organizational Development Lead
Enhancesoft LLC

Date: 11 August 2026

Dear Charity,

Thank you for the opportunity to proceed following our introductory discussions. I have reviewed the Terms of Reference and the Design Brief in detail and am pleased to submit this Technical Proposal and Financial Proposal in line with your application requirements.

Enhancesoft needs a cohesive, modern, and scalable brand ecosystem across the corporate presence and the product family: osTicket, osTicket 2.0, SupportDesk, and the Enterprise Appliance, not four disconnected websites. This submission is centred on Phase 1: the brand and visual operating system that later digital work would build on.

I will deliver Phase 1 directly as lead consultant. Indicative duration is 6–8 weeks from kickoff, subject to stakeholder access and the review cadence we agree. I am available to commence on signing, and to execute the NDA required before work begins. Handover and knowledge transfer are included for every awarded phase.

The Technical Proposal sets out understanding of the assignment, consultant profile and relevant experience, approach and methodology, Phase 1 work plan, brand-ecosystem recommendations as invited, team and collaboration, assumptions, and two referees from similar assignments.

The Financial Proposal is in USD. It sets out a fixed Phase 1 quotation by deliverable, high-level planning bands for Phases 2–6, recommended tools and licences, proposed payment gates for alignment at contract, and commercial terms. Later phases remain separate awards.

Portfolio for continuity with our conversations: <https://brian-portfolio-ecru.vercel.app/>. I look forward to partnering with Enhancesoft on this programme.

Best regards,

Brian Kimathi
Website Design, Branding & Digital Experience Consultant

04 · UNDERSTANDING THE ASSIGNMENT

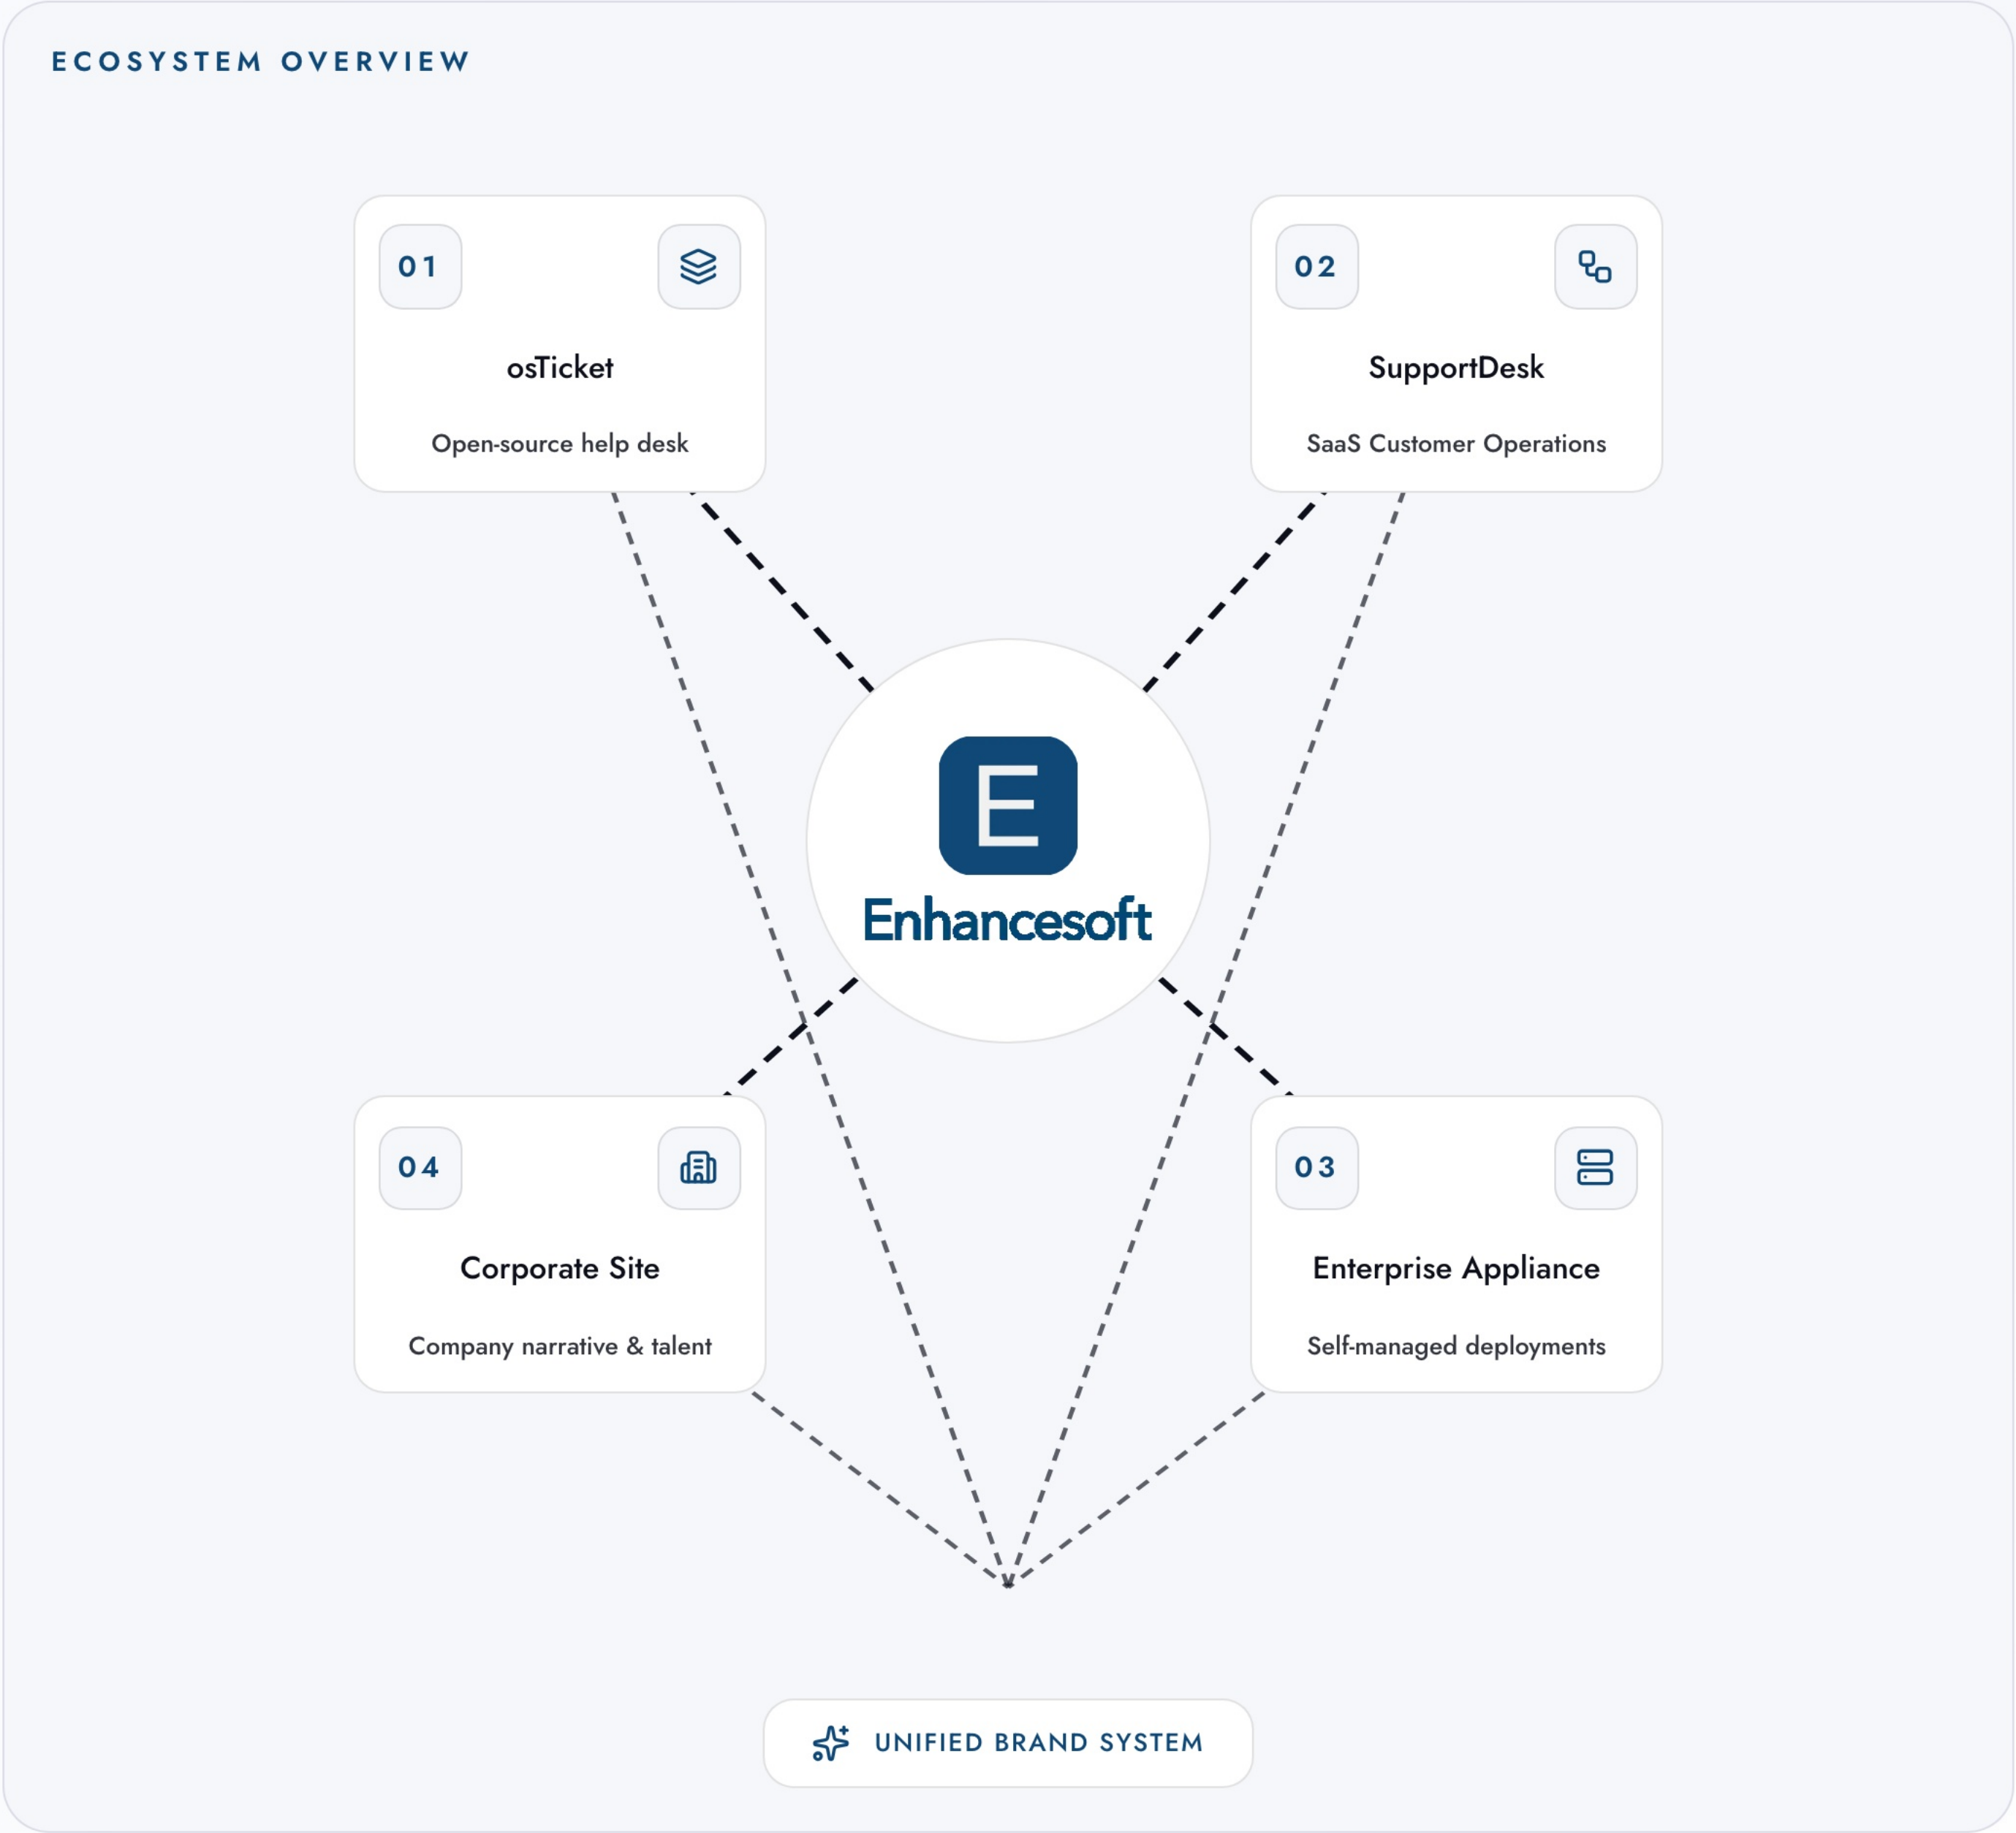

Enhancesoft is a global customer-support and helpdesk software company, creator of osTicket since 2004 and the SaaS platform SupportSystem / SupportDesk, with headquarters in Alexandria, Louisiana and operations in Eldoret, Kenya.

The Company is evolving its platforms as modern, API-first systems and seeks to refresh corporate and product branding, modernize its digital presence, and communicate its products and value proposition through a cohesive brand ecosystem.

This engagement is phased: Phase 1 establishes the corporate and product visual identity system; subsequent phases deliver the corporate website, product websites, and multimedia assets, each evaluated independently before proceeding.

DESIRED OUTCOMES

- Unified corporate and product visual identity
- Clear brand architecture across the product ecosystem
- Reusable guidelines, templates, and asset libraries
- Handover-ready files for long-term internal ownership

05 · ABOUT THE CONSULTANT

Brian Kimathi · Nairobi, Kenya · Software · SaaS · Digital Products

Creative Lead and multidisciplinary digital experience consultant with 8 years across brand identity, websites, UI/UX, product storytelling, and visual communication for technology-driven organisations. Based in Nairobi and working with software, SaaS, and digital-product teams that need a coherent brand and a shippable digital presence, not a logo dropped without a system.

I work in a consultancy style: frame the problem with stakeholders, lock brand architecture and narrative, then produce the identity, guidelines, and assets the client team can own. Reviews, decision logs, and knowledge transfer are part of delivery, not an afterthought at handover.

This ToR needs someone who can hold a multi-product ecosystem (Enhancesoft, osTicket, SupportDesk, and the Enterprise Appliance) without flattening product recognition. That is the work I have been doing for SaaS and enterprise brands: parent + product systems, production files, and a handover the internal team can run.

ALIGNED TO TOR QUALIFICATIONS

- Corporate branding — identity systems and production files
- SaaS / tech websites — modern, responsive, user-centred
- Multi-product ecosystems — parent brand, distinct product properties
- UX / UI & accessibility — usable across devices and audiences
- Web stack & CMS — recommendations at website-phase kickoff
- Multimedia & assets — templates, iconography, visual systems

Kimathi67@gmail.com · +254 708 407362

CAPABILITY SNAPSHOT

8+ years

Brand identity, websites, UI/UX, and product storytelling for technology organisations, from discovery workshops through production-ready files.

SaaS / AdTech

Multi-product ecosystems and platform narratives. Closest analogue to osTicket, SupportDesk, and Appliance sitting under one company brand.

End-to-end

Strategy, creative direction, identity systems, templates, and organised handover, not design files left without context or ownership.

Collaborative KT

Workshops, structured reviews, and knowledge transfer with product, marketing, and leadership so the system is usable internally after sign-off.

Brand architecture

Parent and product systems that stay distinct: the Enhancesoft / osTicket / SupportDesk / Appliance problem, not a single-logo job.

Web & motion

Corporate and product websites, UI language, and multimedia so Phases 2–6 can inherit Phase 1 instead of restarting.

 06 · RELEVANT EXPERIENCE

Selected work mapped to corporate branding, SaaS websites, and multi-product digital ecosystems, the same pattern Enhancesoft needs across osTicket, SupportDesk, and the Enterprise Appliance.

Engagements span enterprise (Safaricom), ICT (IBD), product-led SaaS (MediaPal, YellowCard), digital agency (Evolve-Link), and corporate travel (ATS). Case material and the live portfolio: <https://brian-portfolio-ecru.vercel.app/>

The next pages feature two live cases: InMind OS, a multi-sided product I led as Creative Lead, and MediaPal, a product-led SaaS website at <https://mediapal.net/>.

Client	Type	Relevance to Enhancesoft
MediaPal	AdTech / SaaS	Closest analogue: product-led SaaS brand under a technology parent.
Safaricom	Enterprise / Telecom	Enterprise quality bar and brand governance across many teams.
YellowCard	Fintech / SaaS	Multi-market product site and visual identity for a growth-stage tech company.
Evolve-Link	Digital agency	Brand, web, and digital experience as one practice, the same join Enhancesoft needs in later website phases.
IBD	ICT / software	Closest tech-consultancy analogue: corporate brand plus a live digital presence.
ATS	Corporate travel	Service-brand storytelling with a named referee (Rashid Kaityany).

WHAT WAS DELIVERED

Identity, product narrative, and digital experience for a SaaS platform selling to global advertisers. Marks, UI language, and pages so product and parent stay related without collapsing into one logo.

Corporate branding and digital communications at scale, with usage standards that hold when several teams ship at once. Templates and lockups so governance is usable, not a PDF nobody opens.

Product-led digital presence: positioning, UI language, and pages built for conversion across markets. Visual identity that travels without rewriting the product story each time.

Identity, positioning, and the live digital presence for Evolve-Link (evolve-link.com): a Nairobi agency spanning brand, web, and campaigns that still has to feel like one company.

Identity, product narrative, and digital experience for Infinity Business Dynamics (ibd.co.ls): a software and ICT parent that still has to feel like one company across products and services.

Brand and digital storytelling for a corporate travel company, including web and visual systems. Referee: Rashid Kaityany, Managing Director, ATS Travel Kenya.

 BRIAN KIMATHI | EVOLVE-LINK

BRANDING · WEB · DIGITAL EXPERIENCE

07 · FEATURED CASE — INMIND OS

FEATURED CASE INMIND OS

InMind OS is the fullest expression of how I design a product brand and digital experience as one system: a live product case beyond the public portfolio.

InMind is an operating system for the creator economy: creators, brands, and agencies in one platform for discovery, campaigns, live social performance, and measurable growth. The brief was the same pattern EnhanceSoft faces: several audiences, many touchpoints, and tools that do not talk to each other.

I led the brand, product narrative, and frontend (landing page and dashboard) so three sides of the marketplace feel like one company. Live product, still in the build process: <https://inmind-os.vercel.app/>.

Discover

Creator matching by audience, location, category, and brand fit, ranked for the brief before reach.

Activate

Campaigns from brief to publish: strategy, recruitment, briefing, production, approval, and go-live.

Manage

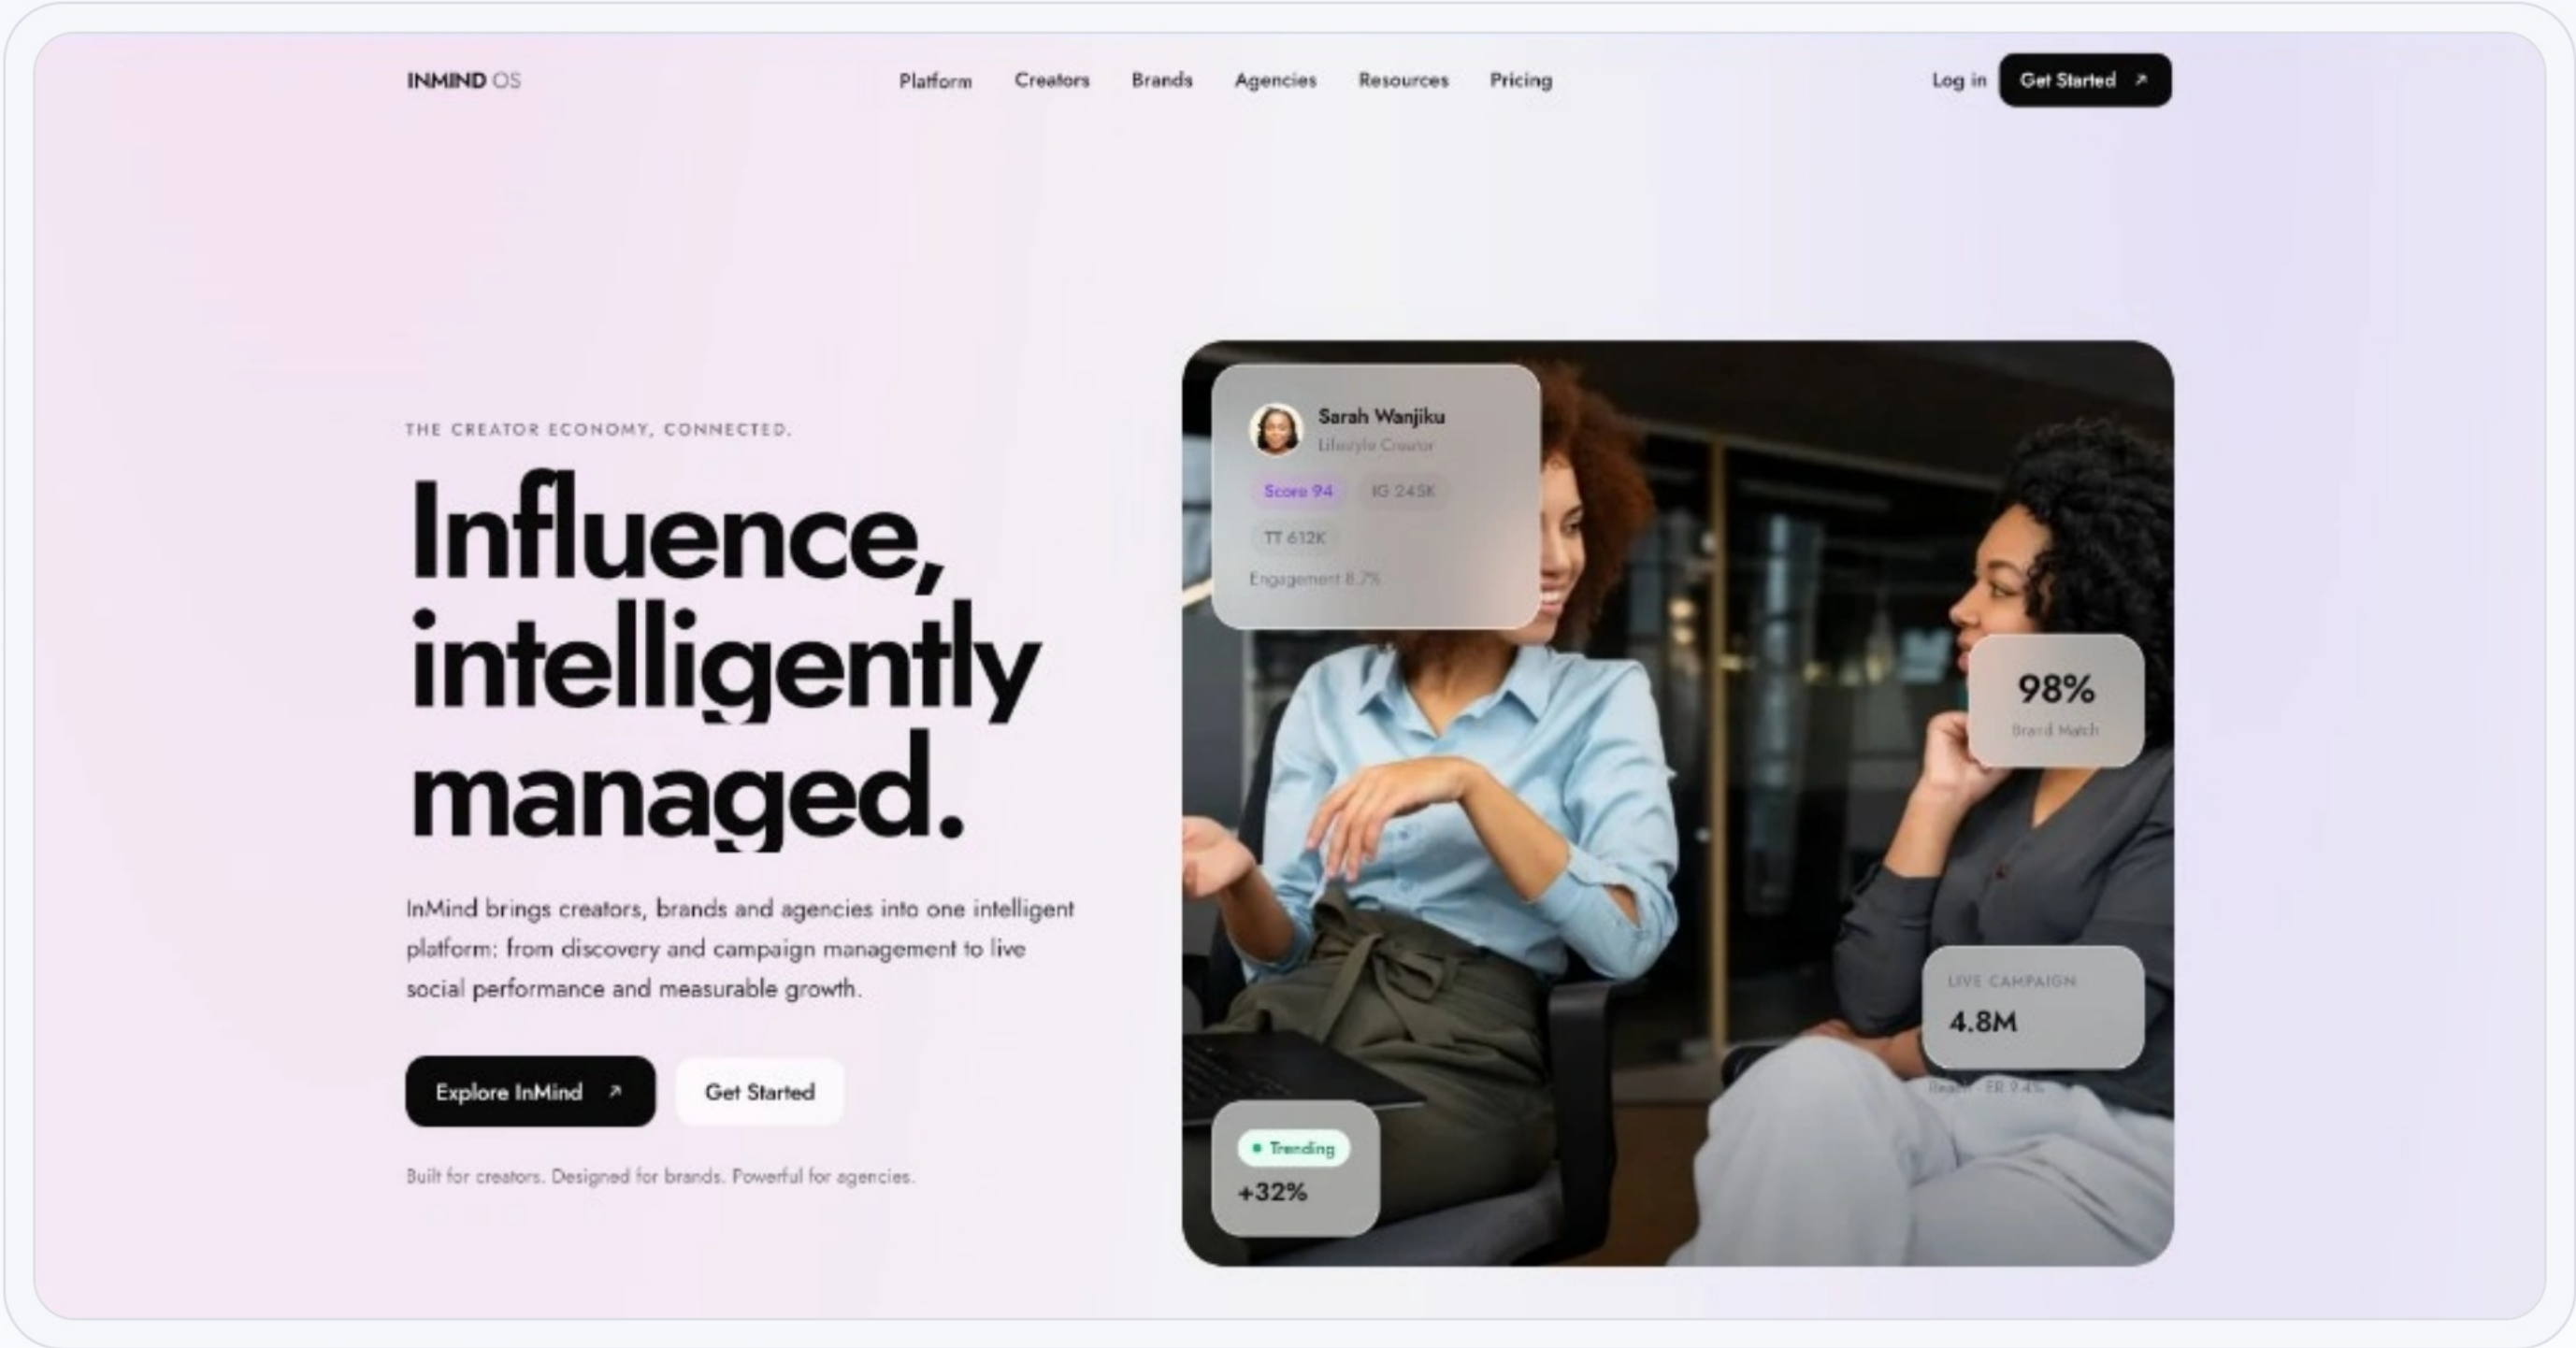

One workspace for deliverables, content QA, and creator relationships that compound instead of starting from zero.

Measure

Live social performance across platforms, plus InMind AI that says what to do next, not only what happened.

RELEVANCE TO ENHANCESOFT

EnhanceSoft is a parent brand with distinct products: osTicket, SupportDesk, and the Enterprise Appliance. InMind had to hold three audiences without three disconnected sites. Phase 1 is the same job: one visual operating system, distinct product identities, and a digital experience the internal team can own.

08 · FEATURED CASE — MEDIAPAL

FEATURED CASE MEDIAPAL

MediaPal is a live product-led SaaS website for a media-buying platform: identity, narrative, and digital experience working as one system, not a campaign look dropped onto a template.

The brief matches Enhancesoft’s later website phases: a technology parent selling a platform to a sophisticated buyer, with several audiences (advertisers, partners, talent) that still have to feel like one company.

I led brand, product narrative, and the live site so the platform reads as data-driven and global without losing a distinct product voice. Live site: <https://mediapal.net/>.

Position

A media-buying platform for data-driven marketers, not a generic ad-tech brochure.

Audiences

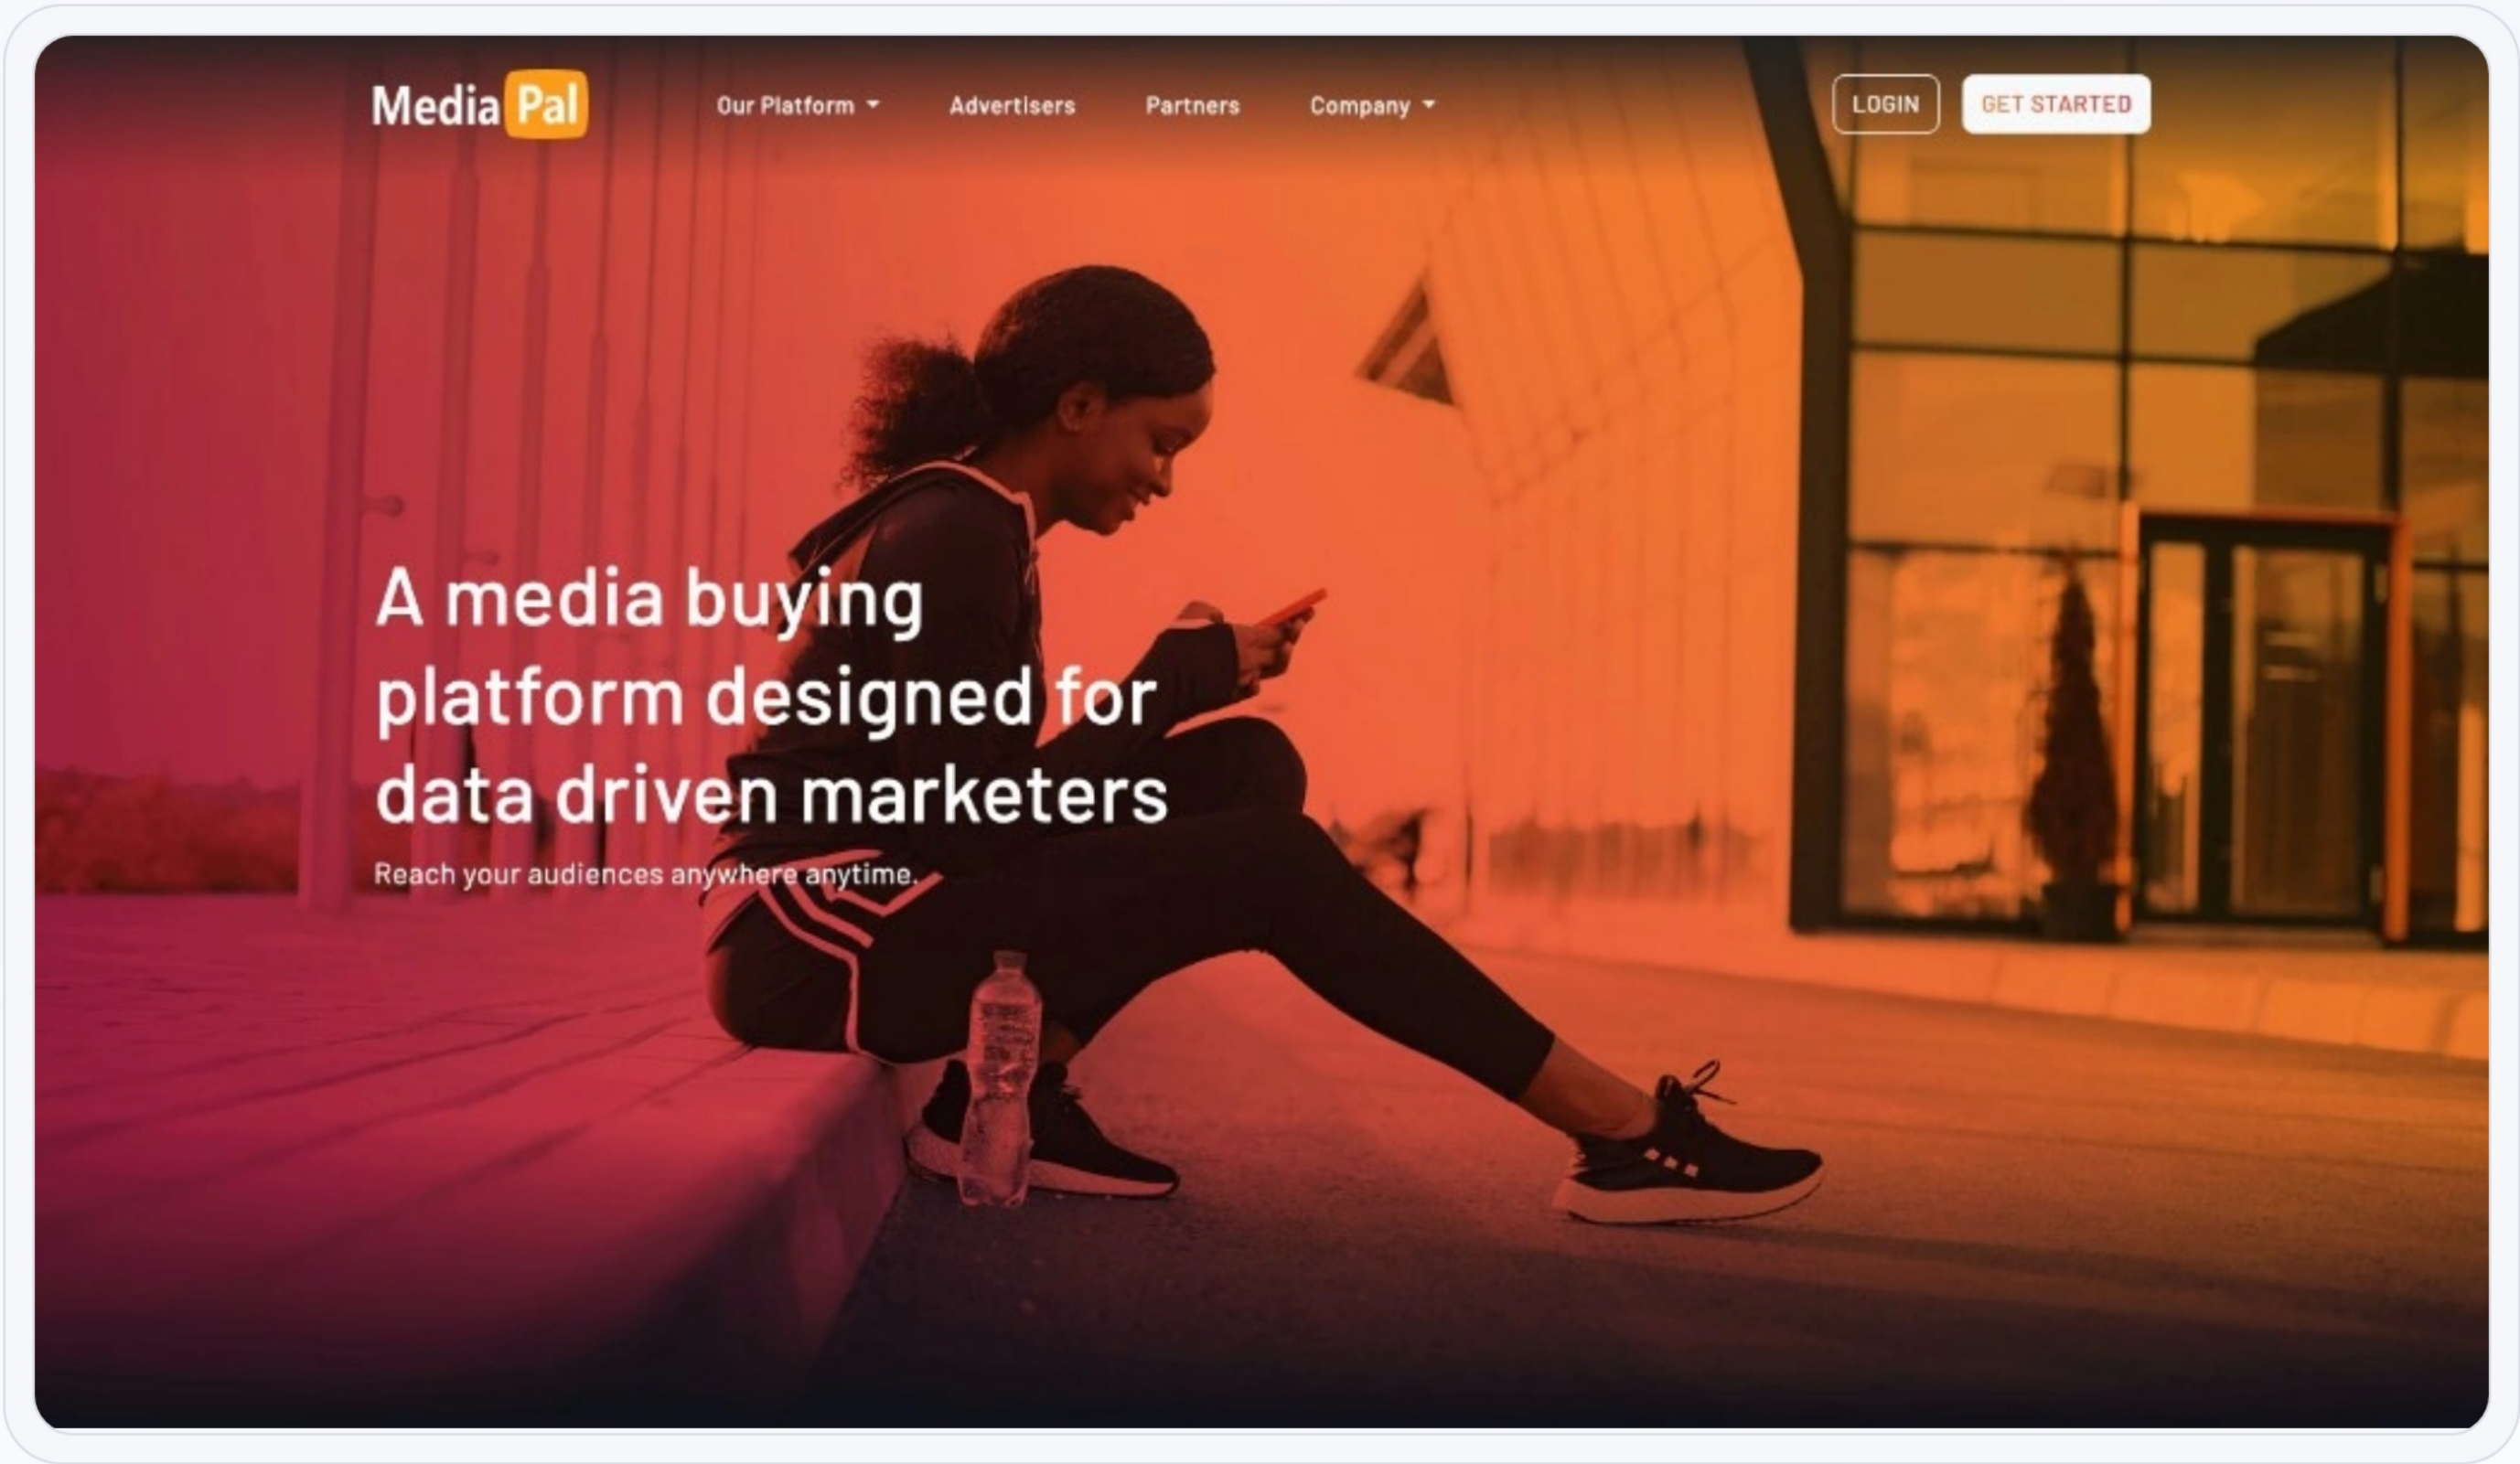

Advertisers, partners, and company pages under one identity, with a clear path to login and get started.

Experience

Hero, product story, and proof (reach, publishers, brands) sequenced for conversion, not decoration.

System

Marks, colour, and UI language that hold from the homepage through platform and company pages.

RELEVANCE TO ENHANCESOFT

Enhancesoft’s corporate and product sites will need the same join: a SaaS story, several audiences, and a visual system that Phase 1 can hand into website work without restarting discovery. MediaPal is that pattern, live.

09 · APPROACH & METHODOLOGY

Phase 1 establishes the brand operating system that unlocks coherent delivery across corporate and product websites in later phases, without restarting discovery each time.

5 workstreams

Discovery, architecture, logo system, guidelines, and reusable assets with knowledge transfer.

6–8 weeks

Indicative Phase 1 window. Bars below assume 8 weeks; kickoff SLA can compress or extend.

Brand OS first

Corporate and product websites in Phases 2–5 inherit this system, with no rediscovery each time.

10 · BRAND ECOSYSTEM RECOMMENDATIONS

Lightweight digital design language in Phase 1

UI tokens and component principles so Phase 2 website work does not restart visual discovery.

Open-source vs commercial brand tension

Resolve osTicket community trust and SupportDesk enterprise conversion in brand architecture early.

Sequence product sites after corporate

Corporate site anchors the umbrella narrative; product sites inherit approved identity with product-specific positioning.

Structured content partnership

Enhancesoft owns copy; consultant advises on IA, hierarchy, UX writing, and publish support during website phases.

PERCEPTION VS DELIVERY

DESIRED PERCEPTION

01

Modern & innovative — Forward-looking visual language for a global technology company

02

Trustworthy & professional — Enterprise-ready credibility without losing approachability

03

Technically sophisticated — Clarity for developers, admins, and decision-makers alike

04

Reliable & scalable — Secure, dependable presence that holds as the product family grows

05

Clean & accessible — Intuitive, usable experiences across digital touchpoints

HOW PHASE 1 RESPONDS

01

Brand OS first — Phase 1 locks architecture, marks, guidelines, and a lightweight digital language.

02

Inherit, don't restart — later websites reuse that system; no rediscovery each phase.

03

Community and commercial — osTicket keeps community trust; SupportDesk and the Appliance sell enterprise without looking like a different company.

04

Corporate site first — product sites then reuse the approved identity with product-specific positioning.

05

Content partnership — Enhancesoft owns copy; we partner on IA, hierarchy, and publish support.

 11 · PHASE 1 WORK PLAN

Discovery & Brand Assessment

Audit the current ecosystem and agree direction before any marks move.

- Review of existing branding, websites, products, and digital assets
- Stakeholder sessions on business, products, audiences, and intended perception
- Category and competitor cues that should inform, not copy, the system
- Discovery and Brand Assessment Report with findings and proposed direction

Logo System & Brand Identity

One family of marks that still lets each product keep its recognition.

- Refinement of Enhancesoft, osTicket, and osTicket 2.0 logos
- Refinement of SupportDesk logo to the approved rebrand direction
- Development of the osTicket Enterprise Appliance identity
- Full variant sets for digital, print, and merchandise, production-ready

Brand Guidelines & Visual Identity Manual

The operating rules so internal teams can apply the system without a designer on every file.

- Brand architecture, logo use, colour, typography, imagery, and applications
- Do/don't standards for corporate and product brands
- Lightweight digital tokens so website phases inherit the same language
- Governance guidance for long-term internal use

Supporting Assets & Handover

Files the Enhancesoft team can own the day after sign-off.

- Reusable templates for decks, docs, and everyday communications
- Iconography (minimum 20) and illustrations (minimum 10)
- Editable source files and an organised asset library
- Knowledge transfer / walkthrough with the Enhancesoft team

INDICATIVE TIMELINE

WEEK 1

Kickoff, access, discovery intake, and scope alignment with the PMO.

WEEK 1–2

Brand assessment, asset audit, and stakeholder inputs.

WEEK 2

Readout — findings, risks, and proposed brand direction.

WEEK 3–4

Logo system refinement, variants, and review cycles.

WEEK 5

Guidelines draft: architecture, colour, type, and governance.

WEEK 6–7

Templates, icons, illustrations, and the asset library.

WEEK 8

Final packaging, handover walkthrough, and sign-off.

DURATION

Indicative Phase 1 duration: **6–8 weeks**, subject to stakeholder availability and the review cadence agreed at kickoff. Week 8 is handover and sign-off, not a buffer for open design.

12 · PHASES 2–6 PROGRAMME ROADMAP

PHASES 2–6 ROADMAP

Phase 1 is the brand operating system. Phases 2–6 inherit it. Each later phase is a separate consultancy contract (ToR 8.1), awarded only after EnhanceSoft is satisfied with delivery quality and the working relationship.

Corporate site first, then product sites, then multimedia, so the umbrella narrative is locked before osTicket, SupportDesk, and the Appliance take distinct product voices.

PHASE 2

Corporate website

INHERITS

Phase 1 marks, digital tokens, and guidelines

DELIVERS

Modern, accessible EnhanceSoft.com: company narrative, products, capabilities, culture, and talent, plus CMS recommendation, documentation, and handover.

PHASE 3

osTicket website

INHERITS

Approved osTicket identity and the same UI language

DELIVERS

Primary open-source property that keeps community trust while sitting clearly in the EnhanceSoft family, including documentation, training, and handover.

PHASE 4

SupportDesk website

INHERITS

SupportDesk mark and commercial positioning from Phase 1

DELIVERS

Product-led site for the SaaS Customer Operations Platform: conversion, proof, and a path to trial, without looking like a different company.

PHASE 5

Enterprise Appliance website

INHERITS

New Appliance identity designed in Phase 1

DELIVERS

Enterprise, self-managed story that extends osTicket without cloning the community site, including documentation, training, and handover.

PHASE 6

Visual communication & multimedia

INHERITS

The full approved system across products and channels

DELIVERS

Graphics and motion that activate the brand: organised asset library, licensing notes, and structured handover. Can overlap late website phases once the system is signed off.

PHASE 1 UNLOCK

Website and multimedia phases start from the signed-off kit: marks, tokens, guidelines, and architecture. Discovery is not restarted. Each later phase is a separate contract (ToR 8.1), evaluated on delivery quality before the next starts.

13 · TEAM & COLLABORATION

PROPOSED PROJECT TEAM

Brian Kimathi — Lead Consultant. Nairobi. The named personnel for this phase.

The proposed project team for Phase 1 is Brian Kimathi as Lead Consultant, a single named practitioner covering strategy, identity, production, and handover. ToR 6.1 notes that required qualifications may be demonstrated by one individual.

I am the single point of contact for the Project Manager as Contract Manager. Discovery workshops, design reviews, and milestone acceptance sit on the same calendar as delivery; there is no separate account team to hand off to.

No part of the assignment will be outsourced or subcontracted without Enhancesoft’s prior written approval (ToR 8.5). Any key-personnel change would follow ToR 8.2. Phase 1 does not require a development or motion specialist; if later website phases are awarded, any additional named personnel would be proposed under that separate contract.

ROLES & RESPONSIBILITIES

- **Engagement lead** — Client liaison, scope, timeline, and final delivery sign-off
- **Discovery & brand strategy** — Workshops, assessment report, and brand architecture
- **Identity & art direction** — Logo system, guidelines, and digital design language
- **Production & handover** — Templates, assets, source files, and knowledge transfer

GOVERNANCE

- Report to Enhancesoft Project Manager (Contract Manager) with agreed review cadence
- Discovery workshops, progress meetings, design reviews, and iterative refinement
- Deliverables submitted for review per the proposed workplan; QA against industry best practice
- Handover and knowledge transfer included for every phase, not Phase 1 only
- Source files, editable assets, documentation, credentials (where applicable), and walkthroughs
- Enhancesoft retains ownership of all deliverables upon final acceptance and payment

14 · ASSUMPTIONS & REFERENCES

These assumptions protect the Phase 1 timeline and fee. Where they do not hold, scope, duration, or commercial terms would be reviewed with the Project Manager before work continues.

ASSUMPTIONS

- **Phase 1 boundary** — brand and visual identity only; websites sit in later phases
- **Logo refinement** — existing marks refined unless discovery approves a fuller rebrand
- **Enterprise Appliance** — new identity, not a refinement of an existing mark
- **Remote delivery** — Phase 1 is run from Nairobi; travel is not in the fee unless separately quoted
- **Working language** — English; Louisiana / Eldoret overlap by appointment with the PMO
- **NDA before kickoff** — ToR 8.4 — NDA signed before workshops or source files are shared
- **Review rounds** — two cycles per workstream unless a different SLA is agreed at kickoff
- **Review SLAs** — feedback turnaround agreed at kickoff so Week 8 stays handover, not catch-up
- **Copy ownership** — Enhancesoft owns product and marketing copy; consultant advises on structure and UX writing
- **Trademark & legal** — name and mark clearance sits with Enhancesoft; the consultant does not provide legal opinion
- **Font licences** — commercial typefaces quoted once approved; not assumed inside the Phase 1 fee until selected
- **Icon & illustration pack** — minimum 20 icons and 10 illustrations; volume beyond that is a change of scope
- **Handover on every phase** — knowledge transfer is in-scope for each awarded phase, not Phase 1 only
- **IP on payment** — ownership of Phase 1 deliverables transfers on final acceptance and full payment (ToR 8.9)
- **Tools** — consultant-recommended stack; Enhancesoft has no preferred third-party list
- **Payment gates** — milestones proposed against the deliverable breakdown; aligned at contract

DEPENDENCIES

- **Contract signed** — Phase 1 starts after the Consultancy Contract is in place (ToR 4.1)
- **NDA executed** — signed before workshops or source files are shared (ToR 8.4)
- **Contract Manager** — Project Manager available as the decision path for reviews and acceptance
- **Decision path** — who can lock architecture and marks if Peter / CEO is not on the review cycle
- **Source files at kickoff** — current logos and any guidelines in editable form (AI, EPS, SVG), not PNG-only
- **Access to current properties** — live sites, brand folders, and product context for the audit
- **In-scope marks confirmed** — Enhancesoft, osTicket, osTicket 2.0, SupportDesk, Enterprise Appliance
- **Product owners** — named input for osTicket, SupportDesk, and Appliance so architecture is not PMO-only
- **Reviewers named** — who signs architecture, marks, and the manual, so cycles do not stall
- **Workshop dates held** — kickoff and discovery slots in the first two weeks, or the 6–8 week window moves
- **Company support** — timely information, documentation, and approvals as in ToR 8.7
- **Handover attendees** — who on the Enhancesoft side receives knowledge transfer and owns the files after Week 8

Financial Proposal

PART B

PHASE 1 FOCUS — FIXED FEE, THEN PLANNING BANDS IF AWARDED

The fixed fee for the Phase 1 identity programme, then planning bands for the websites and multimedia if Enhancesoft proceeds. Tools, payment gates, and commercial terms complete the offer.

 16 · PHASE 1 QUOTATION

Phase 1 is a fixed fee in USD for the Corporate Branding and Visual Identity System: one overall fee, not day rates. The seven lines below are the full scope.

Indicative duration is 6–8 weeks. Handover and knowledge transfer are in the fee, not extras.

Not included: website build, CMS, hosting, or Phase 6 multimedia. Commercial font licences, if needed, are quoted once typefaces are approved. Payment milestones are proposed on the following slides for Enhancesoft to align at contract.

Activity / deliverable	Amount (USD)
Discovery & brand assessment report	\$600
Brand architecture & creative direction	\$575
Logo system — Enhancesoft, osTicket, osTicket 2.0, SupportDesk, Appliance	\$1,400
Visual identity manual (incl. digital tokens)	\$875
Templates, min. 20 icons & 10 illustrations, asset library	\$875
Packaging, source files, documentation & knowledge transfer	\$350
Project management & review cycles	\$275

PHASE 1 TOTAL

Fixed fee · USD · handover and knowledge transfer included

\$4,950

7

Deliverable lines

Discovery through handover: the breakdown requested, not a blended day rate.

6–8 wks

Delivery window

Indicative Phase 1 duration. Week 8 is handover and sign-off, not leftover design time.

 17 · PHASES 2–6 ESTIMATES

Phases 2–6 are indicative budgetary bands in USD for planning, not a commitment to award, and not a blended programme fee. Each band is the monthly rate x the indicative duration. Sequence and what each phase delivers sit in the technical proposal. Each phase is a separate consultancy contract.

The five lines cover the corporate website, osTicket website, SupportDesk website (including the interactive product demo), Enterprise Appliance website, and multimedia. Handover and knowledge transfer are included in every awarded phase.

Completion of Phase 1 does not select later phases, in line with ToR 8.1. Detailed quotations, CMS, hosting, and production volumes are scoped if Enhancesoft proceeds with that phase.

Phase / scope	Duration	Estimate (USD)
Phase 2 — Enhancesoft Corporate Website	6–8 weeks	\$3,700 – \$4,950
Phase 3 — osTicket Website	8–10 weeks	\$4,950 – \$6,200
Phase 4 — SupportDesk Website	10–12 weeks	\$6,200 – \$7,425
Phase 5 — osTicket Enterprise Appliance Website	8–10 weeks	\$4,950 – \$6,200
Phase 6 — Visual Communication & Multimedia	8–12 weeks	\$4,950 – \$7,425

PHASES 2–6 PLANNING BAND

Budgetary only · USD · each awarded phase quoted under a separate contract

\$24,750 – \$32,200

\$4,950

Phase 1 already quoted

Fixed fee from the previous slide. Not included in this planning band.

\$29,700 – \$37,150

Programme if all awarded

\$29,700 – \$37,150 if every phase is awarded.

Completion of Phase 1 does not select later phases (ToR 8.1).

18 · TOOLS & PAYMENT MILESTONES

THIRD-PARTY SOFTWARE & LICENCES

Item	Purpose	Cost (USD)	Justification
Figma (Professional)	Brand system, guidelines, comments, and inspectable handover	Included	Consultant licence. Shared file for reviews; no extra client seat required unless Enhancesoft wants one.
Adobe Creative Cloud	Logo production and print-ready vectors (AI, SVG, EPS, PDF)	Included	Consultant licence. After Effects is not required until Phase 6.
Commercial font licences	Desktop + webfont rights for approved brand typefaces	0–800	The only likely Phase 1 pass-through. Quoted once typefaces are approved so Enhancesoft owns the licences. USD 0 if we stay on already-licensed or open fonts.
Stock photography	Not required for Phase 1 identity	Not billed	Marks, guidelines, templates, and the minimum 20 icons / 10 illustrations are original. A stock library (Adobe Stock, Getty, Unsplash+) is not needed. If photography is requested later, it is quoted separately.
Project tools (Linear, Asana, Jira)	Internal timeline — not a client deliverable	Not billed	Reviews run in Figma comments, email, and the PMO’s existing cadence. Linear/Asana would be consultant overhead, not a Phase 1 cost to Enhancesoft.
CMS / hosting	Website platform — Phases 2–5 only	Quoted in Phase 2	Not required for Phase 1. Recommended at website-phase kickoff if those phases are awarded.

PHASE 1 PAYMENT MILESTONES

Milestone	%	USD
Contract signing / kickoff	30%	\$1,485
Approved brand direction & logo system	40%	\$1,980
Final guidelines, assets, handover & knowledge transfer	30%	\$1,485

These percentages are proposed against the Phase 1 deliverable breakdown and workplan. Enhancesoft may align the gates at contract stage. The amounts below are the Phase 1 fee split, not additional charges.

Invoices follow acceptance, not the calendar. The 40% gate is approved brand direction and the logo system, not a week on the Gantt. Week 8 remains handover and sign-off.

If Phases 2–6 are awarded, each has its own quotation and payment schedule under a separate contract. Phase 1 gates do not carry over.

19 · COMMERCIAL TERMS & CLOSING

ToR 6 asked for assumptions, exclusions, dependencies, and other commercial considerations. Assumptions and dependencies sit earlier in this document. The terms below cover currency, contracts, intellectual property, and what sits outside the Phase 1 fee.

Phase 1 payment gates are proposed on the previous slide against the deliverable breakdown. Enhancesoft may align them at contract stage. The Contract Manager accepts deliverables and approves payments (ToR 7.1).

Handover and knowledge transfer are in the Phase 1 fee and in every later phase that is awarded, not extras. Completion of Phase 1 does not select Phases 2–6 (ToR 8.1). Where an assumption does not hold, scope, duration, or fee is reviewed with the Project Manager before work continues.

COMMERCIAL CONSIDERATIONS

- **Currency** — all figures in this proposal are USD
- **Phase 1 fee** — fixed USD 4,950 for the identity programme as itemised, not a day-rate retainer
- **Phases 2–6** — planning bands only; each awarded phase is a separate contract with its own quotation (ToR 8.1)
- **Payment approval** — invoices follow the proposed Phase 1 gates; the Contract Manager approves payments (ToR 7.1)
- **IP transfer** — deliverables and source files become Enhancesoft property on final acceptance and full payment (ToR 8.9)
- **Confidentiality** — NDA before kickoff; work product is not used in portfolio or publicity without prior written approval (ToR 8.4)
- **Original work** — Phase 1 originals; any third-party material is licensed for Enhancesoft’s commercial use (ToR 8.10)
- **Schedule** — the 6–8 week plan is adhered to; delays are flagged promptly with mitigation (ToR 8.3)
- **Change of scope** — work beyond the seven Phase 1 lines is quoted and agreed before it starts
- **Delivery** — Phase 1 is delivered by Brian Kimathi from Nairobi; no subcontracting without prior written approval (ToR 7.2 / 8.5)

EXCLUSIONS

- **Websites** — design, CMS, hosting, and development sit in Phases 2–5
- **Interactive demo** — the SupportDesk product teaser is Phase 4, not Phase 1
- **Product UI** — in-app / software interface design is outside the identity programme
- **Multimedia** — motion, GIFs, and production beyond Phase 1 identity assets sit in Phase 6
- **Stock & media** — paid media, photography shoots, and stock libraries unless separately quoted
- **Font licences** — commercial typefaces are quoted once approved; not inside the USD 4,950 until selected
- **Extra volume** — icons or illustrations beyond the stated minimums are a change of scope
- **Physical production** — print runs, apparel, and signage manufacture; files are in scope, fabrication is not
- **Translation** — localisation beyond English is not in the Phase 1 fee
- **Travel & retainer** — on-site workshops and post-handover support are quoted if requested

COMMITMENT

I appreciate the opportunity to partner with Enhancesoft on this phased brand and digital experience programme, and welcome feedback ahead of final submission.

Brian Kimathi

Website Design, Branding & Digital Experience Consultant

BRIAN KIMATHI | ENHANCESOFT PROPOSAL

Thank You

11 AUGUST 2026

TECHNICAL & FINANCIAL PROPOSAL

PHASE 1 FOCUS — READY TO COMMENCE ON SIGNING

I look forward to partnering with Enhancesoft on the identity programme.
The NDA is executed before work begins.
